Looking for a solution that will help you efficiently manage stock reordering? Give you control over your sales? Reduce threats such as fraud? RightPOS system with Stock Control is the answer. We look for client's benefit further by automatically recording sales on guest invoices for integrated invoicing and fast, efficient check-outs.

What is RightPOS?

Historically Point of Sale (POS) refers to a till at the point of purchase by a sales clerk, for example at the single shop counter or in the super shop. RightPOS system is vastly superior to a till in that it performs many more functions including inventory management, stock control, and reordering. Additional functions include recording of transactions by user and price control and management.

RightPOS systems also enable management to run multiple POS locations and distribution points with a central database for reporting. POS systems are designed to identify stock changes and price abuse in order to eliminate fraud and reduce management overhead.

Using RightPOS system will ensure that front-of-house areas such as pharmacy and super shops are run efficiently while automatically charging transactions to guest accounts, preparing order notifications, posting to accounting systems and producing business reports showing sales trends, price discrepancies and profits.

How can RightPOS Software help your business?

Right**POS** Software help you:

- 🔗 To easily record sales transactions
- 🔗 To print receipt for customers
- 🔗 Manage product pricing and discount
- 🔗 Automatic notifications when items are about to expire.
- 🔗 Get instance report of your sales and products across all your locations
- 🔗 To easily add, edit and remove products
- 🔗 To simplifies purchase orders, transfer and stock-takes
- 🔗 Keep track of you customer with flexible reporting tools
- 🔗 Synchronize your online and retail stores

Key Features

Right**POS** Software key features:

- 🔗 Point of sales payment
- 🔗 Order management
- 🔗 Staff accounts
- 🔗 Point as use or Expiry management
- 🔗 Real-time business reporting
- 🔗 Products and inventory management
- 🔗 Customer relationship management
- 🔗 Expenses management
- 🔗 Manage item price list
- 🔗 Integration with barcode scanner and receipt printer

RightPOS Functions

The right POS system will streamline your business operations in several areas including:

Inventory Management

RightPOS solution gives you the ability to control stock by categorizing and tracking items. This ensures adequate stock levels which increases productivity and sales. Administration burden is dramatically reduced.

Purchasing

A stock controller is notified of purchasing requirements and orders quickly and easily sent to suppliers. Receipted orders automatically adjust stock levels. Orders are tracked and late delivery escalated.

Sales

The RightPOS terminal can run a tab, receipt cash sales, or complete transactions for consolidated invoicing. Stock levels are automatically adjusted.

Reports & Analysis

RightPOS system produces daily sales reports and journals. RightPOS reports are designed to identify sales trends, cash point performance and accurately reflect cost versus sales price.

Accuracy

RightPOS systems provide accuracy in the prices that are charged. Each item is entered by scanning a bar code or manually selecting an option from a menu on the screen. The price for each item is programmed into the system so the correct price is charged.

Improve the efficiency of execution

One function of RightPOS is to increase the efficiency and productivity. It can help to save server time and RightPOS can solve this problem easily.

Customer Management

Log purchases and keep in touch with customers through marketing tools.

Employee Management

Track employees' hours and sales while analyzing who your top performers are.

RightPOS Highlights:

Real-time trade margin:

RightPOS system is a combination of hardware and software that processes sales transactions and manages inventory in real time. Your data is accessible anywhere, anytime via the internet and inventory tracking and sales reporting in real time eliminate guesswork. Advanced analytics helps you make informed business decisions.

Data Security:

It is important as a responsible smart business owner to ensure that you take all the necessary precautions to protect the personal data of your customers. In selecting RightPOS system, data safety and security should be among the most important factors you consider.

Tracking of inventories:

By this module, tracking your stock control data and metrics on a continuous basis enables you to spot trends and gain insights that can help you make better decisions for your inventory.

Life-time free Update:

For RightPOS system business owners required to pay up for the front software and hardware devices. In addition, typical RightPOS usually includes software updates, maintenance, and technical support charges also at any time.

Mobile Reporting and Price Control:

Sales are one thing, but it's the actual payments that determine how much money your business makes or loses. RightPOS mobile reporting system helps you track cash flow, credit card payments, and inefficiencies that affect your bottom line from anywhere at any time.

RightPOS systems generally offer a variety of ways to keep track of pricing, including add-on amounts, percentage of cost, margin percentage and custom formulas.

Various Payment Option:

Offer convenience to your customers with RightPOS payment terminals all payment options. They include: International Bar Code Reader, smart card reader and wireless couponing & wallet use cases.

OS Support:

RCSL has adopted an open platform OS, which enables developer to integrate and build applications easily for RightPOS system.

Automated expiry management:

Digital expiry management tracking systems automate critical supply functions such as supply requisitioning, inventory management, and information capture (which typically includes expiration dates). Products are scanned when they're put on shelves, and again at the point-of-use. RightPOS systems capture expiration dates, making it possible for supply chain personnel to recall that data for the items still on the shelf in order to monitor and manage product rotation.

Inter-store stock transfer:

RightPOS software is equipped with store-to-store transfer feature, which allows instant stock transfer from one store to another, avoiding sales loss and boosting revenue. The same is reflected in accounts as well. Some of the benefits of store to store transfer is:

- **Sales-** Even if the stock is unavailable at one store, sales aren't lost.
- **Customer Satisfaction-** With avoiding situations of out of stock inventory level, customers don't return empty handed.
